

FEELING TOMORROW'S ELECTRICS TODAY

ONLINE WORKSHOP EVENTS

On January 17th 2026 and February 22nd 2026 there will be two online workshop events, in which people from around the world will be joining together to understand and experience the natural electric side of life.

Both events are inspired by the graphic novel *Electric Life*, the hidden radiance of everything, and open up new ways of looking at and experiencing yourself and everything around you. An excellent team – including the author – will be facilitating these processes.

For information about the book or to read a review, click on the following links:

[Electric Life Book](#) - [Review](#)

Natural electricity influences our thoughts, feelings and emotions. It is the foundation of our memory and consciousness, and determines the quality of the water we drink and the food we eat. It is the language and the power that integrates everything in life: from atoms in a rock, to cells in our body, bacteria in a colony, trees in a forest, fish in a school and even stars in a galaxy.

Next to stunning insights, science stories and short films, these workshops introduce innovative approaches to personally practice and respond to the natural electroclimate of the future today.

If you consider that this might be something for you, please register for one or both events.

Facilitators:

Sander Funneman, Ruth Hill, Anne-Marie Meevis, Simon Small

January 17th 2026

from 19:00 – 21:30 CET

Fee \$ 20

Registration: [WORKSHOP](#)

February 22nd 2026

from 14:00 – 17:00 CET

Fee \$ 20

Registration: [WORKSHOP](#)
